

Department of Veterans Affairs

§4.119

	Rat- ing
Or rate as disfigurement of the head, face, or neck (DC 7800) or scars (DC's 7801, 7802, 7803, 7804, or 7805), depending upon the predominant disability.	
7829 Chloracne:	
Deep acne (deep inflamed nodules and pus-filled cysts) affecting 40 percent or more of the face and neck	30
Deep acne (deep inflamed nodules and pus-filled cysts) affecting less than 40 percent of the face and neck, or; deep acne other than on the face and neck	10
Superficial acne (comedones, papules, pustules, superficial cysts) of any extent ..	0
Or rate as disfigurement of the head, face, or neck (DC 7800) or scars (DC's 7801, 7802, 7803, 7804, or 7805), depending upon the predominant disability.	
7830 Scarring alopecia:	
Affecting more than 40 percent of the scalp	20
Affecting 20 to 40 percent of the scalp	10
Affecting less than 20 percent of the scalp ..	0
7831 Alopecia areata:	
With loss of all body hair	10
With loss of hair limited to scalp and face	0
7832 Hyperhidrosis:	
Unable to handle paper or tools because of moisture, and unresponsive to therapy	30
Able to handle paper or tools after therapy ..	0
7833 Malignant melanoma:	
Rate as scars (DC's 7801, 7802, 7803, 7804, or 7805), disfigurement of the head, face, or neck (DC 7800), or impairment of function (under the appropriate body system).	
Note: If a skin malignancy requires therapy that is comparable to that used for systemic malignancies, i.e., systemic chemotherapy, X-ray therapy more extensive than to the skin, or surgery more extensive than wide local excision, a 100-percent evaluation will be assigned from the date of onset of treatment, and will continue, with a mandatory VA examination six months following the completion of such antineoplastic treatment, and any change in evaluation based upon that or any subsequent examination will be subject to the provisions of §3.105(e). If there has been no local recurrence or metastasis, evaluation will then be made on residuals. If treatment is confined to the skin, the provisions for a 100-percent evaluation do not apply.

THE ENDOCRINE SYSTEM

§ 4.119 Schedule of ratings—endocrine system.

	Rat- ing
7900 Hyperthyroidism	

	Rat- ing
Thyroid enlargement, tachycardia (more than 100 beats per minute), eye involvement, muscular weakness, loss of weight, and sympathetic nervous system, cardiovascular, or gastrointestinal symptoms	100
Emotional instability, tachycardia, fatigability, and increased pulse pressure or blood pressure	60
Tachycardia, tremor, and increased pulse pressure or blood pressure	30
Tachycardia, which may be intermittent, and tremor, or; continuous medication required for control	10
NOTE (1): If disease of the heart is the predominant finding, evaluate as hyperthyroid heart disease (DC 7008) if doing so would result in a higher evaluation than using the criteria above.	
NOTE (2): If ophthalmopathy is the sole finding, evaluate as field vision, impairment of (DC 6080); diplopia (DC 6090); or impairment of central visual acuity (DC 6061–6079).	
7901 Thyroid gland, toxic adenoma of	
Thyroid enlargement, tachycardia (more than 100 beats per minute), eye involvement, muscular weakness, loss of weight, and sympathetic nervous system, cardiovascular, or gastrointestinal symptoms	100
Emotional instability, tachycardia, fatigability, and increased pulse pressure or blood pressure	60
Tachycardia, tremor, and increased pulse pressure or blood pressure	30
Tachycardia, which may be intermittent, and tremor, or; continuous medication required for control	10
NOTE (1): If disease of the heart is the predominant finding, evaluate as hyperthyroid heart disease (DC 7008) if doing so would result in a higher evaluation than using the criteria above.	
NOTE (2): If ophthalmopathy is the sole finding, evaluate as field vision, impairment of (DC 6080); diplopia (DC 6090); or impairment of central visual acuity (DC 6061–6079).	
7902 Thyroid gland, nontoxic adenoma of	
With disfigurement of the head or neck	20
Without disfigurement of the head or neck	0
NOTE: If there are symptoms due to pressure on adjacent organs such as the trachea, larynx, or esophagus, evaluate under the diagnostic code for disability of that organ, if doing so would result in a higher evaluation than using this diagnostic code.	
7903 Hypothyroidism	
Cold intolerance, muscular weakness, cardiovascular involvement, mental disturbance (dementia, slowing of thought, depression), bradycardia (less than 60 beats per minute), and sleepiness	100
Muscular weakness, mental disturbance, and weight gain	60
Fatigability, constipation, and mental sluggishness	30
Fatigability, or; continuous medication required for control	10
7904 Hyperparathyroidism	
Generalized decalcification of bones, kidney stones, gastrointestinal symptoms (nausea, vomiting, anorexia, constipation, weight loss, or peptic ulcer), and weakness	100
Gastrointestinal symptoms and weakness	60
Continuous medication required for control	10
NOTE: Following surgery or treatment, evaluate as digestive, skeletal, renal, or cardiovascular residuals or as endocrine dysfunction.	
7905 Hypoparathyroidism	

	Rat- ing		Rat- ing
Marked neuromuscular excitability (such as convulsions, muscular spasms (tetany), or laryngeal stridor) plus either cataract or evidence of increased intracranial pressure (such as papilledema)	100	NOTE (1): An Addisonian "crisis" consists of the rapid onset of peripheral vascular collapse (with acute hypotension and shock), with findings that may include: anorexia; nausea; vomiting; dehydration; profound weakness; pain in abdomen, legs, and back; fever; apathy, and depressed mentation with possible progression to coma, renal shutdown, and death.	
Marked neuromuscular excitability, or; paresthesias (of arms, legs, or circumoral area) plus either cataract or evidence of increased intracranial pressure	60	NOTE (2): An Addisonian "episode," for VA purposes, is a less acute and less severe event than an Addisonian crisis and may consist of anorexia, nausea, vomiting, diarrhea, dehydration, weakness, malaise, orthostatic hypotension, or hypoglycemia, but no peripheral vascular collapse.	
Continuous medication required for control	10	NOTE (3): Tuberculous Addison's disease will be evaluated as active or inactive tuberculosis. If inactive, these evaluations are not to be combined with the graduated ratings of 50 percent or 30 percent for non-pulmonary tuberculosis specified under § 4.88b. Assign the higher rating.	
7907 Cushing's syndrome		7912 Pluriglandular syndrome	
As active, progressive disease including loss of muscle strength, areas of osteoporosis, hypertension, weakness, and enlargement of pituitary or adrenal gland	100	Evaluate according to major manifestations.	
Loss of muscle strength and enlargement of pituitary or adrenal gland	60	7913 Diabetes mellitus	
With striae, obesity, moon face, glucose intolerance, and vascular fragility	30	Requiring more than one daily injection of insulin, restricted diet, and regulation of activities (avoidance of strenuous occupational and recreational activities) with episodes of ketoacidosis or hypoglycemic reactions requiring at least three hospitalizations per year or weekly visits to a diabetic care provider, plus either progressive loss of weight and strength or complications that would be compensable if separately evaluated	100
NOTE: With recovery or control, evaluate as residuals of adrenal insufficiency or cardiovascular, psychiatric, skin, or skeletal complications under appropriate diagnostic code.		Requiring insulin, restricted diet, and regulation of activities with episodes of ketoacidosis or hypoglycemic reactions requiring one or two hospitalizations per year or twice a month visits to a diabetic care provider, plus complications that would not be compensable if separately evaluated	60
7908 Acromegaly		Requiring insulin, restricted diet, and regulation of activities	40
Evidence of increased intracranial pressure (such as visual field defect), arthropathy, glucose intolerance, and either hypertension or cardiomegaly	100	Requiring insulin and restricted diet, or; oral hypoglycemic agent and restricted diet	20
Arthropathy, glucose intolerance, and hypertension	60	Manageable by restricted diet only	10
Enlargement of acral parts or overgrowth of long bones, and enlarged sella turcica	30	NOTE (1): Evaluate compensable complications of diabetes separately unless they are part of the criteria used to support a 100 percent evaluation. Noncompensable complications are considered part of the diabetic process under diagnostic code 7913.	
7909 Diabetes insipidus		NOTE (2): When diabetes mellitus has been conclusively diagnosed, do not request a glucose tolerance test solely for rating purposes.	
Polyuria with near-continuous thirst, and more than two documented episodes of dehydration requiring parenteral hydration in the past year ..	100	7914 Neoplasm, malignant, any specified part of the endocrine system	100
Polyuria with near-continuous thirst, and one or two documented episodes of dehydration requiring parenteral hydration in the past year	60	NOTE: A rating of 100 percent shall continue beyond the cessation of any surgical, X-ray, antineoplastic chemotherapy or other therapeutic procedure. Six months after discontinuance of such treatment, the appropriate disability rating shall be determined by mandatory VA examination. Any change in evaluation based upon that or any subsequent examination shall be subject to the provisions of § 3.105(e) of this chapter. If there has been no local recurrence or metastasis, rate on residuals.	
Polyuria with near-continuous thirst, and one or more episodes of dehydration in the past year not requiring parenteral hydration	40	7915 Neoplasm, benign, any specified part of the endocrine system rate as residuals of endocrine dysfunction.	
Polyuria with near-continuous thirst	20		
7911 Addison's disease (Adrenal Cortical Hypofunction)			
Four or more crises during the past year	60		
Three crises during the past year, or; five or more episodes during the past year	40		
One or two crises during the past year, or; two to four episodes during the past year, or; weakness and fatigability, or; corticosteroid therapy required for control	20		

Department of Veterans Affairs

§ 4.122

	Rat- ing
7916 Hyperpituitarism (prolactin secreting pituitary dysfunction)	100
7917 Hyperaldosteronism (benign or malignant)	
7918 Pheochromocytoma (benign or malignant)	
NOTE: Evaluate diagnostic codes 7916, 7917, and 7918 as malignant or benign neoplasm as appropriate.	
7919 C-cell hyperplasia of the thyroid	100
NOTE: A rating of 100 percent shall continue beyond the cessation of any surgical, X-ray, antineoplastic chemotherapy or other therapeutic procedure. Six months after discontinuance of such treatment, the appropriate disability rating shall be determined by mandatory VA examination. Any change in evaluation based upon that or any subsequent examination shall be subject to the provisions of § 3.105(e) of this chapter. If there has been no local recurrence or metastasis, rate on residuals.	

[61 FR 20446, May 7, 1996]

NEUROLOGICAL CONDITIONS AND CONVULSIVE DISORDERS

§ 4.120 Evaluations by comparison.

Disability in this field is ordinarily to be rated in proportion to the impairment of motor, sensory or mental function. Consider especially psychotic manifestations, complete or partial loss of use of one or more extremities, speech disturbances, impairment of vision, disturbances of gait, tremors, visceral manifestations, injury to the skull, etc. In rating disability from the conditions in the preceding sentence refer to the appropriate schedule. In rating peripheral nerve injuries and their residuals, attention should be given to the site and character of the injury, the relative impairment in motor function, trophic changes, or sensory disturbances.

§ 4.121 Identification of epilepsy.

When there is doubt as to the true nature of epileptiform attacks, neurological observation in a hospital adequate to make such a study is necessary. To warrant a rating for epilepsy, the seizures must be witnessed or verified at some time by a physician. As to frequency, competent, consistent lay testimony emphasizing convulsive and immediate post-convulsive characteristics may be accepted. The frequency of seizures should be ascertained under the ordinary conditions of life (while not hospitalized).

§ 4.122 Psychomotor epilepsy.

The term psychomotor epilepsy refers to a condition that is characterized by seizures and not uncommonly by a chronic psychiatric disturbance as well.

(a) Psychomotor seizures consist of episodic alterations in conscious control that may be associated with automatic states, generalized convulsions, random motor movements (chewing, lip smacking, fumbling), hallucinatory phenomena (involving taste, smell, sound, vision), perceptual illusions (deja vu, feelings of loneliness, strangeness, macropsia, micropsia, dreamy states), alterations in thinking (not open to reason), alterations in memory, abnormalities of mood or affect (fear, alarm, terror, anger, dread, well-being), and autonomic disturbances (sweating, pallor, flushing of the face, visceral phenomena such as nausea, vomiting, defecation, a rising feeling of warmth in the abdomen). Automatic states or automatisms are characterized by episodes of irrational, irrelevant, disjointed, unconventional, asocial, purposeless though seemingly coordinated and purposeful, confused or inappropriate activity of one to several minutes (or, infrequently, hours) duration with subsequent amnesia for the seizure. Examples: A person of high social standing remained seated, muttered angrily, and rubbed the arms of his chair while the National Anthem was being played; an apparently normal person suddenly disrobed in public; a man traded an expensive automobile for an antiquated automobile in poor mechanical condition and after regaining conscious control, discovered that he had signed an agreement to pay an additional sum of money in the trade. The seizure manifestations of psychomotor epilepsy vary from patient to patient and in the same patient from seizure to seizure.

(b) A chronic mental disorder is not uncommon as an interseizure manifestation of psychomotor epilepsy and may include psychiatric disturbances extending from minimal anxiety to severe personality disorder (as distinguished from developmental) or almost complete personality disintegration (psychosis). The manifestations of a chronic mental disorder associated
